KRNT

BNB SMART CHAIN

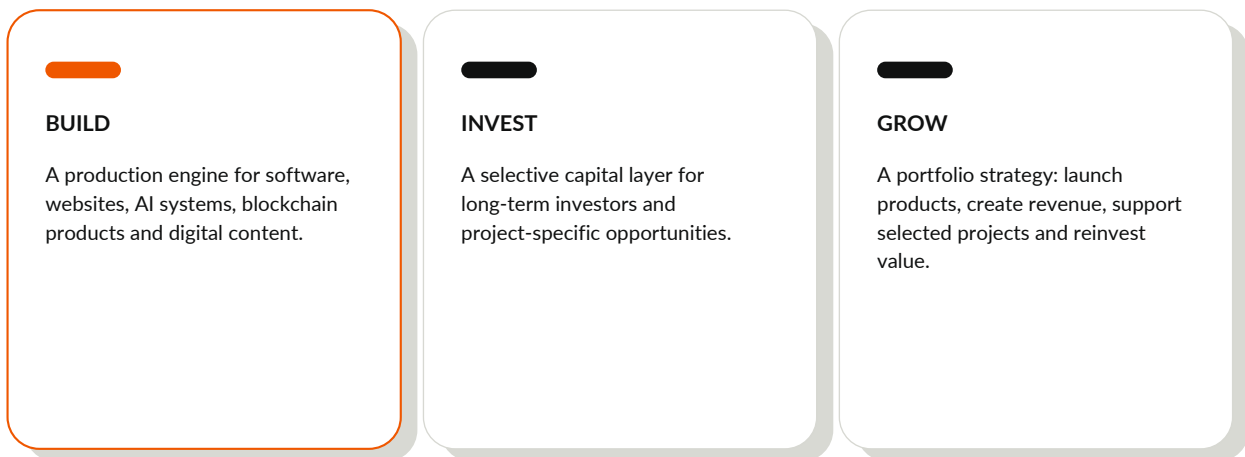

WHITE PAPER 2.0

2026 EDITION

CONTROLLED SUPPLY / PRODUCT-LED GROWTH

From token launch to value creation

Karnet's next phase is defined by operating capability: building products, supporting selected projects, attracting long-term capital and creating a durable portfolio.

THE OPERATING THESIS

Karnet connects capital + talent + technology and turns that combination into products and operating projects. KRNT is one layer of this ecosystem — it is not a substitute for project ownership.

THE 3-YEAR DIRECTION

- 01 **A working studio**
- 02 **A selective portfolio**
- 03 **Controlled token circulation**

The roadmap has moved

The original document described the foundation, token release, studio activities, liquidity and an early roadmap. Those milestones are now historical context; the new roadmap is execution-first.

PAST

FOUNDATION

Initial investment concept, studio direction, token framework and ecosystem planning.

NOW

OPERATING

KRNT is live; the studio is producing software and digital products; project partnerships are becoming a core operating model.

NEXT

PORTFOLIO

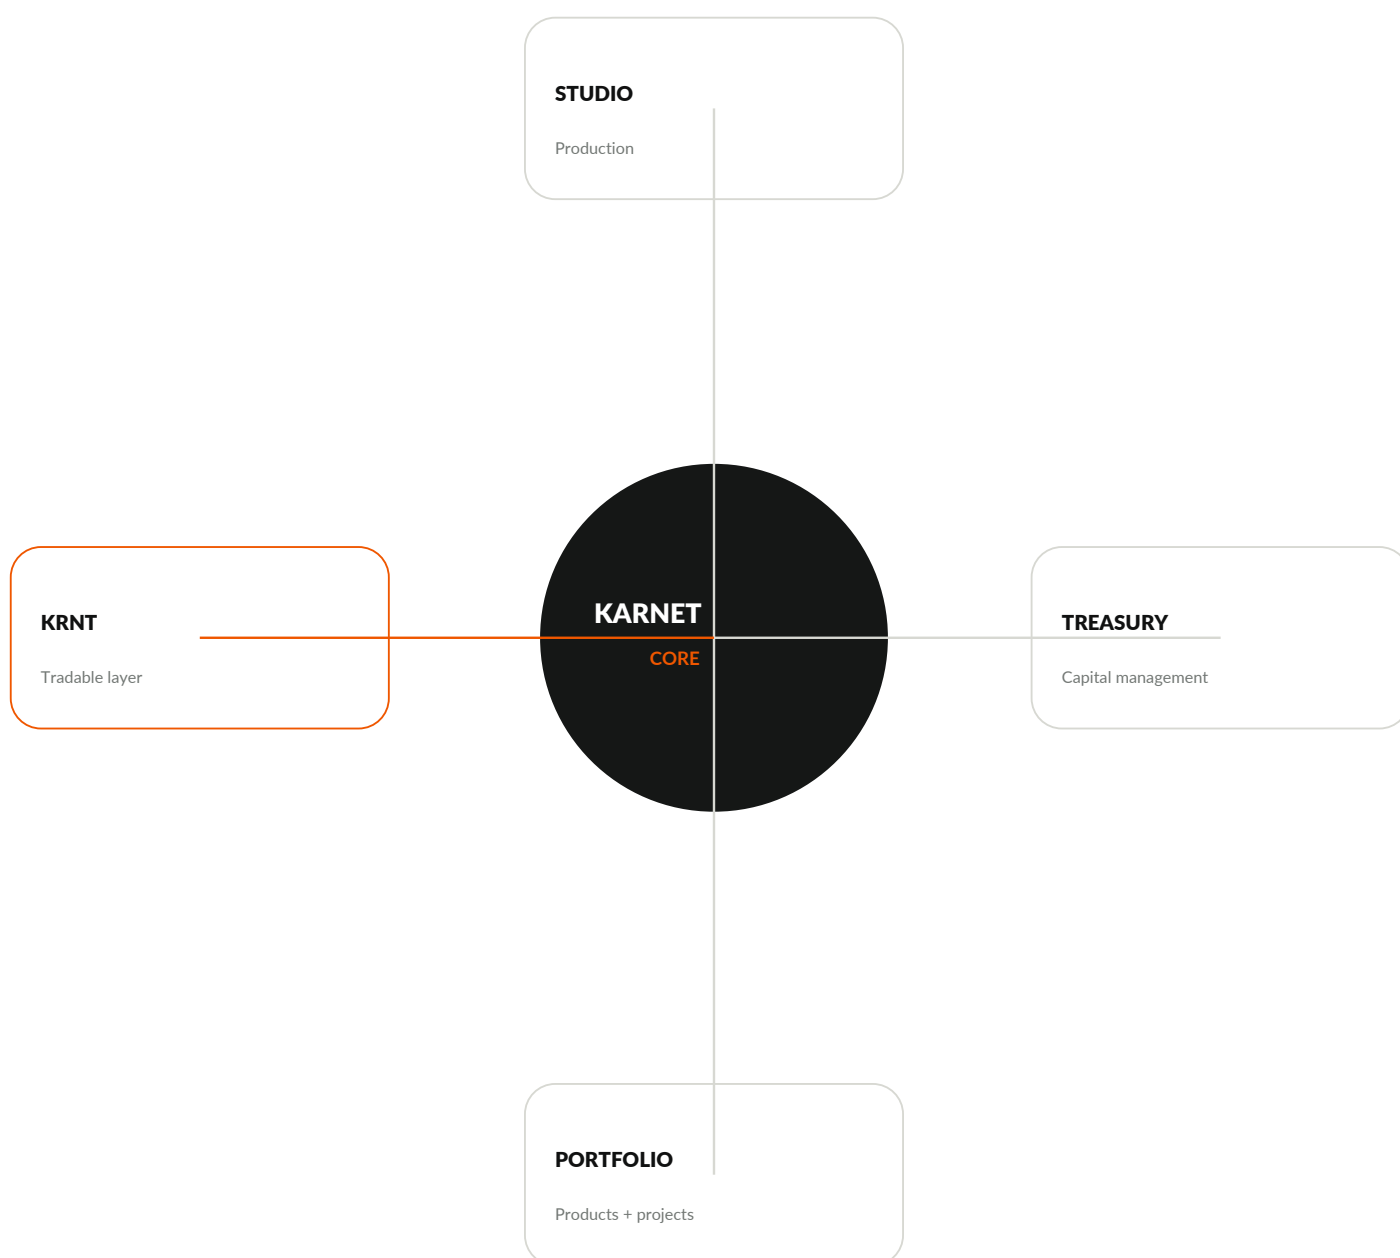

Commercialize products, support selected projects, attract long-term capital and build a managed portfolio.

THE SHIFT

Less emphasis on broad distribution. More emphasis on production, disciplined capital allocation and measurable value creation.

The Karnet architecture

The system separates the tradable token layer from project ownership, operating activity and treasury management.

SEPARATION MATTERS

Holding KRNT means holding KRNT. Project-level equity or economic participation is created through separate project structures and agreements.

Karnet Studio

A compact, AI-augmented production engine focused on turning ideas into deployable products and services.

SOFTWARE

Web apps, SaaS, e-commerce and custom platforms.

AI

AI-assisted development, automation and intelligent services.

BLOCKCHAIN

Tokens, smart contracts, blockchain applications and infrastructure.

WEB

Modern websites, product interfaces and digital experiences.

CONTENT

Digital content and media production.

MUSIC PRODUCTION

Music creation, production and distribution, including music and music videos.

The current team combines software development, software architecture, sound engineering and investment/management capabilities, with AI used extensively across production.

Build once. Productize. Sell. Improve.

The commercial engine reduces dependence on one-off development by turning reusable technical capability into sellable products.

01

DISCOVER

Identify a real problem with a defined buyer.

02

ARCHITECT

Design a reusable technical and business foundation.

03

BUILD

Ship a production-ready product with focused scope.

04

LAUNCH

Validate demand through sales, pilots and real usage.

05

ITERATE

Support customers and continuously improve.

06

SCALE

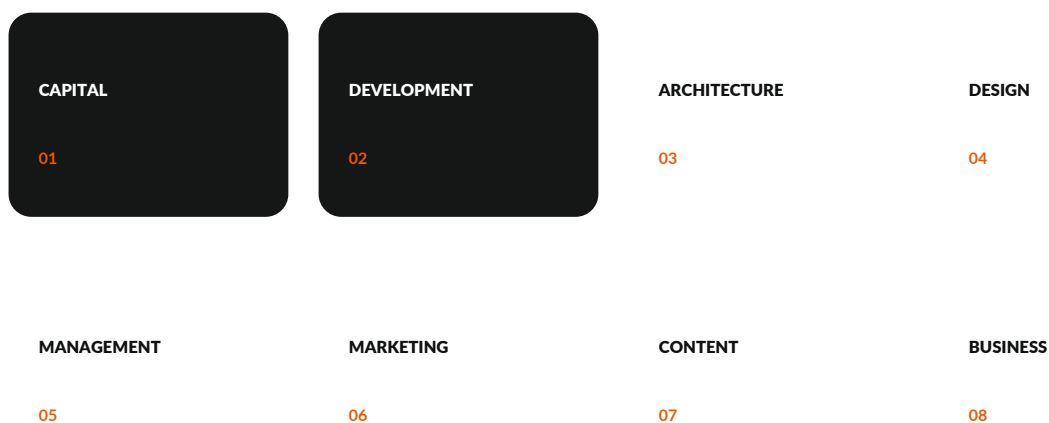

Expand successful products through licensing, subscriptions or partnerships.

CURRENT EXAMPLE

Persian-localized Next.js + Medusa e-commerce product, prepared for commercial distribution in the Persian market.

Contribution becomes participation

Karnet can enter projects as builder, operator, investor or a combination of these roles.

PROJECT-LEVEL OWNERSHIP

Where appropriate, contributors may receive project-level ownership or economic participation based on the structure and value of their contribution. Exact allocation is defined per project.

KRNT ownership does not automatically grant project equity, revenue rights or participation rights.

Two ways to participate

The model is intentionally hybrid: an investor may hold KRNT, invest directly in a selected project, or combine both where appropriate.

KRNT PATH

Market access: KRNT is available through supported markets, including DEX liquidity and the project's exchange infrastructure.

Meaning: the holder owns the KRNT tokens themselves.

DIRECT PROJECT

Project access: selected opportunities can be structured separately.

Meaning: participation is defined by a project-specific agreement, not by token ownership.

OPTIONAL COMBINATION

This separates liquid token exposure from project-specific participation.

INVESTOR PROFILE

Karnet is oriented toward long-term strategic participants rather than short-term trading activity. Large capital movements are intended to be coordinated and managed where practical.

Token structure

KRNT is the ecosystem's tradable token layer, designed around controlled circulation and strategic use rather than maximum public distribution.

TOTAL SUPPLY

333,333,333,333

KRNT

NETWORK	BNB Smart Chain
CONTRACT	0xA0dcd9f952842E2e2e5E5441CC50007d169AcE5B
TOKEN	KRNT

KRNT is not equity in Karnet. Holding KRNT does not automatically create ownership, revenue rights or participation rights in any Karnet project.

Controlled supply strategy

The project deliberately limits intended external circulation. The objective is strategic control, long-term alignment and sufficient liquidity — not continuous public distribution.

- The majority of supply remains within Karnet's internal treasury and strategic structures.
- Limited allocations may support liquidity, strategic investors, ecosystem development and project contributors.
- Karnet does not intend to continuously increase circulation simply to manufacture market activity.
- The supply strategy favors long-term control over short-term token turnover.

The stated external-circulation figure is a strategic ceiling, not a promise that the full amount will enter the market.

Capital management architecture

Treasury assets are managed across separated wallets, networks and storage mechanisms according to security, liquidity and investment requirements.

01

PRIMARY TREASURY

Core contract / treasury structure

02

COLD RESERVES

Long-term storage and protected assets

03

LIQUIDITY

DEX pools and market-supporting positions

04

INVESTMENT

Capital allocated to selected opportunities

SECURITY PRINCIPLE

Asset segregation is intended to improve security, operational control and risk management. Treasury structures may evolve as the ecosystem grows.

Liquidity without a forced exit model

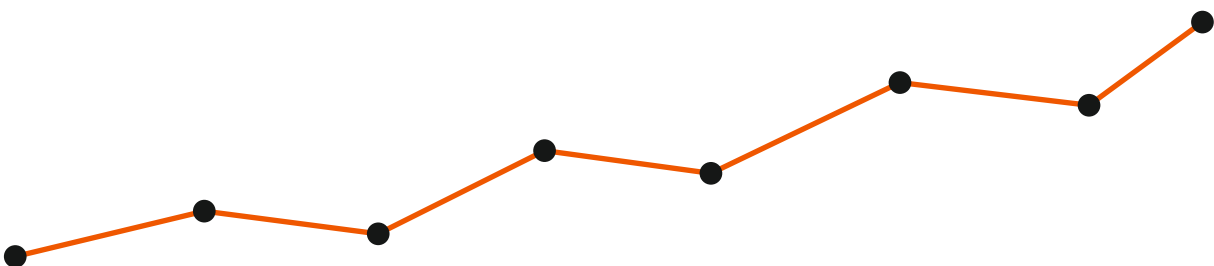

A portion of relevant assets may be maintained in liquidity pools. Liquidity supports access and orderly market operation — it does not guarantee a specific exit price.

SMALL POSITIONS

Public market liquidity, including DEXs, can provide an exit route subject to pool depth and prevailing market conditions.

LARGE POSITIONS

Large strategic transactions may be coordinated with management where practical to reduce market disruption and support orderly execution.

LIQUIDITY IS A FUNCTION OF MARKET CONDITIONS

Karnet does not guarantee liquidity, a specific token price, repurchase or fixed return.

Where capital can create value

Capital is intended to move toward activities that can strengthen the studio, portfolio and ecosystem.

PRODUCT DEVELOPMENT

New software, AI, blockchain and digital products.

PRODUCT SCALE

Commercialization, support and growth of successful products.

PARTNERSHIPS

Co-building selected projects with founders and external teams.

TECHNOLOGY

Infrastructure, architecture and technical capabilities.

LIQUIDITY

Liquidity positions aligned with ecosystem needs.

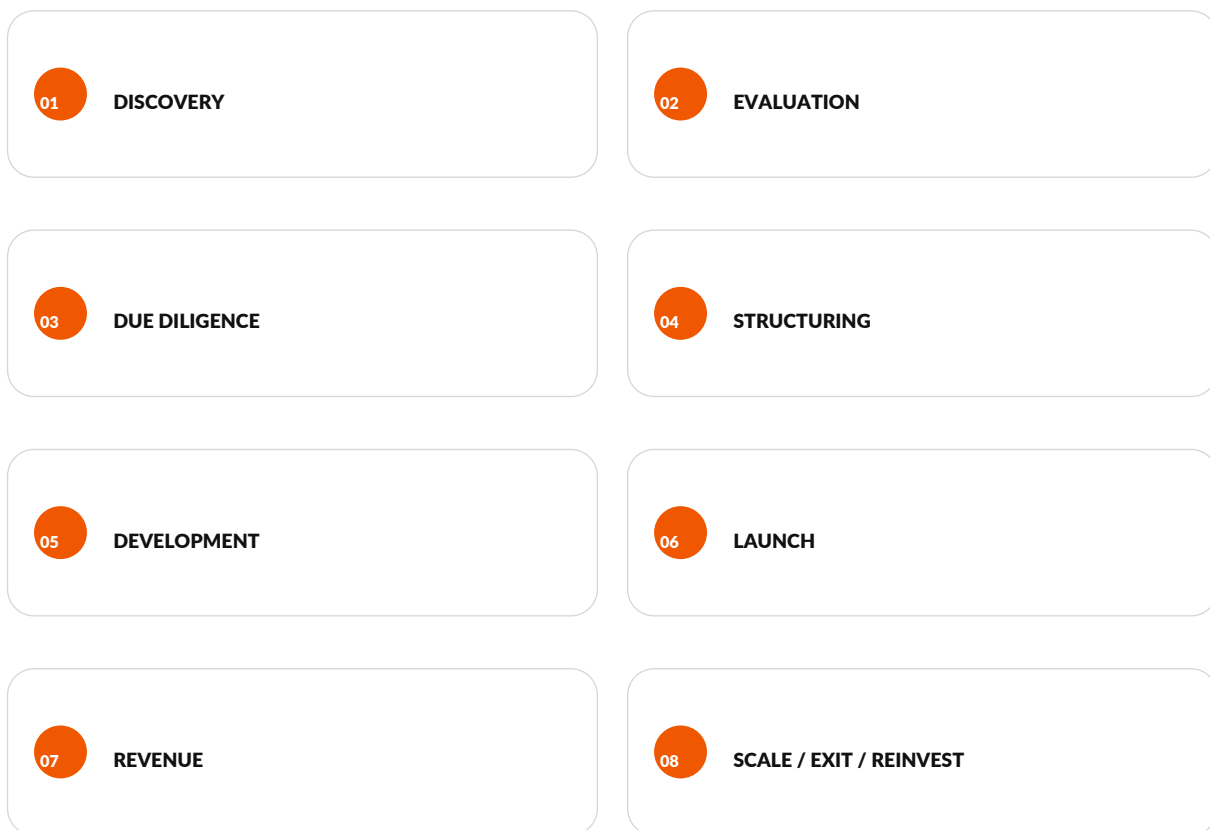

STRATEGIC INVESTMENTS

Selected businesses and projects evaluated by management.

Project lifecycle

A repeatable process is the bridge between capital and execution.

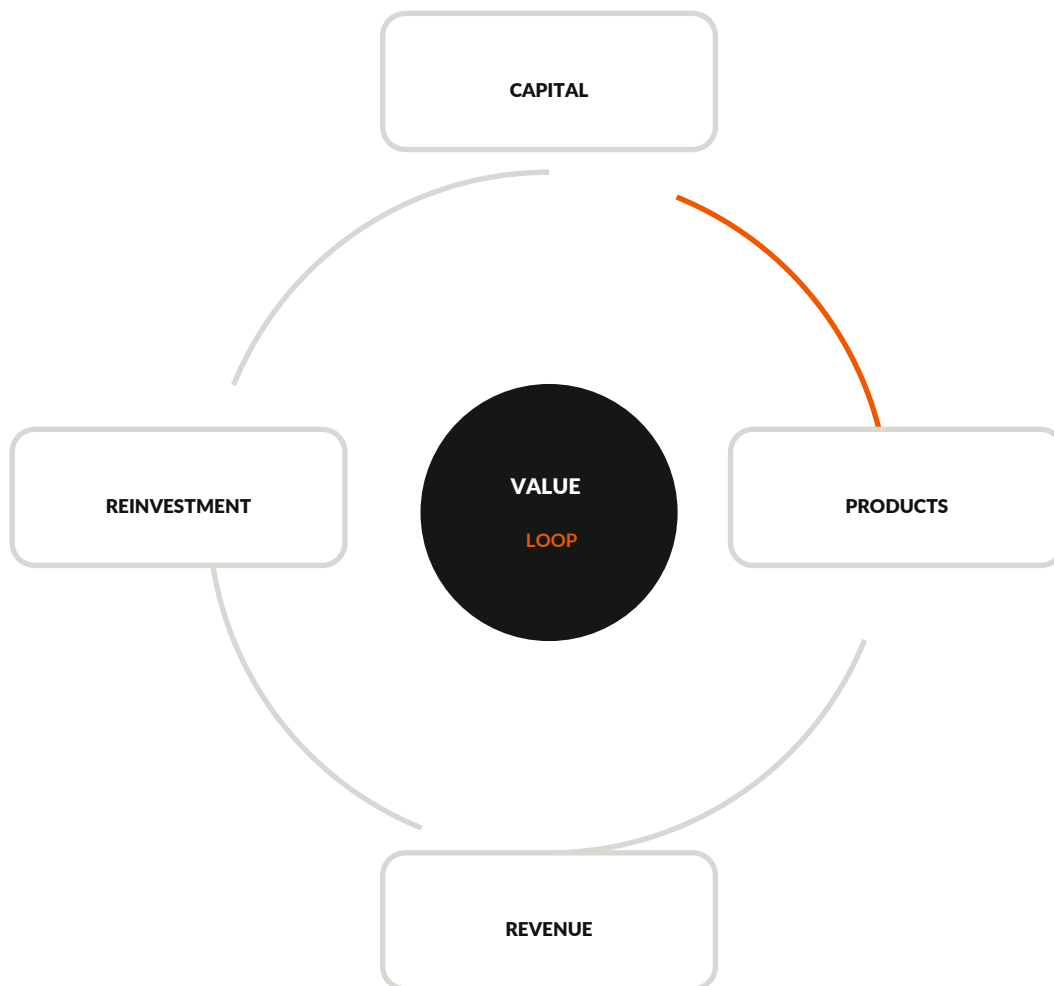

FEEDBACK LOOP

Every project generates information: customer behavior, delivery data, revenue performance and operational lessons. That feedback informs the next product or investment decision.

The value creation loop

The long-term model is a cycle rather than a single fundraising event.

Capital supports production → products create revenue and business value → value supports portfolio growth → successful outcomes create capacity for reinvestment.

2026 → 2029

The new roadmap is built around operating maturity, not speculative milestones.

2026

CONSOLIDATE

Operate the current ecosystem

KRNT market presence • Studio/APPEK execution • Product commercialization preparation • Treasury discipline

2027

PRODUCTIZE

Turn production into repeatable revenue

Launch and sell digital products • Build portfolio • Selected founder partnerships • Project participation structures

2028

CAPITALIZE

Expand long-term capital capacity

Grow strategic investor network • Stronger due diligence • Selected project investments • Portfolio reporting

2029

SCALE

Scale the ecosystem

Expand successful products • Strategic partnerships • Selective exits where appropriate • Reinvestment and ecosystem expansion

The option to build a network

A proprietary blockchain network is not a present requirement. It becomes rational only when the ecosystem has enough scale or a clear technical/economic reason to own the base layer.

- 01 The ecosystem reaches sufficient scale to justify dedicated infrastructure.
- 02 Existing blockchain infrastructure becomes a meaningful limitation.
- 03 Project and transaction volume supports the economics of a proprietary network.
- 04 A native network creates clear technological or economic value.

KARNET NETWORK

A future option — not a present roadmap requirement.

Risk & transparency

Karnet is an operating and investment ecosystem exposed to market, technology, execution, liquidity, regulatory and operational risks.

MARKET

KRNT can increase or decrease in market value.

TECHNOLOGY

Software, blockchain infrastructure and integrations can fail or require changes.

EXECUTION

Projects can miss objectives, budgets or timelines.

LIQUIDITY

Market depth can change and may be insufficient for large transactions.

REGULATORY

Applicable rules can change across jurisdictions.

OPERATIONAL

People, processes, counterparties and infrastructure affect outcomes.

No guaranteed outcome. Karnet does not guarantee token appreciation, investment returns, project success, liquidity, a specific exit price or a fixed return.

KARNET

WHITE PAPER 2.0

THE NEXT

CHAPTER

IS EXECUTION.

Karnet's long-term objective:
connect capital, talent and technology — then repeatedly turn that combination into products, projects
and sustainable value.

BUILD

INVEST

GROW

Disclosure & reference notes

This document describes the current operating model and roadmap supplied by the project team.

The original KRNTCoin white paper presented an investment concept, production/studio activities, token rules, supply, liquidity and an earlier roadmap. This edition keeps the relevant terminology while replacing completed roadmap items with the current operating direction.

TOKEN REFERENCE

KRNT

Contract: 0xA0dcd9f952842E2e2e5E5441CC50007d169AcE5B

Total supply: 333,333,333,333 KRNT

Maximum intended external circulation: 109,999,999,999 KRNT (~33%)

IMPORTANT

This White Paper is informational. It is not legal, financial, tax or investment advice. Nothing in this document is a promise or guarantee of token price appreciation, liquidity, investment return, project performance or a specific exit outcome. Project-level rights, where offered, are governed separately by the relevant project structure and agreements.
